

SAS-172

**“MULTI-DOMAIN OPERATIONS WARGAME”
RESEARCH TASK GROUP**

CONNECTIONS UK CONFERENCE

06.09.2023

HOW WE UNDERSTAND MDO

BLUE UNDERSTANDING

- **Integration Across Domains:** Prioritize synchronization and coordination within and across domains.
- **Rapid Adaptability & Decision-Making:** Emphasize swift response and adaptability in the face of evolving modern battlefields and emerging technologies.
- **Collaboration & Partnerships:** Address modern threats through multi-branch defense collaboration and cooperation with allies and inter-departmental entities.
- **Balancing Tactical & Strategic Perspectives:** Align immediate tactical operations with overarching strategic objectives and goals.

RED UNDERSTANDING

- **Non-Traditional Warfare Methods:** Prioritize precision, speed, and information in operations.
- **Integrated Air Strikes & Non-Military Methods:** Leverage massive, coordinated strikes and non-military approaches, often with broader implications.
- **System-to-System Confrontations:** Emphasize on information denial and exploitation.
- **Automated Decision-Making Trend:** Recognize the growing importance of automating decision processes in warfare.
- **Increasing Role of Non-Kinetic Strategies:** Acknowledge non-kinetic approaches as pivotal in achieving warfare objectives.

GREEN UNDERSTANDING

- **Operational Strengthening & Personnel Enhancement:** Emphasize bolstering operational capabilities in a MD environment with a focus on personnel growth, equipment augmentation, and tailored training programs.
- **Extended Mobility & Asymmetric Defense:** Prioritize the capability to operate remotely for extended durations, highlighting asymmetric operations and Anti-Access/Area Denial systems.
- **Conventional Threat Awareness:** Recognize the presence and impact of high-lethality conventional weapon systems in modern conflicts.
- **Preparedness & Point of Injury Care:** Emphasize the significance of readiness and the need for strategies like point of injury care and prehospital medicine in the face of threats.

NATIONAL EXPECTATIONS

NATO

- Sees MDO as integral to its broad political and military strategy.
- Emphasizes rapid planning, battlespace management, and execution across all domains to gain an advantage.
- Focuses on breaking the relationship between the levels of operation and synchronizing cross-domain effects.
- Information Domain vs Cyberspace

UK

- Focuses on Multi-Domain Integration (MDI) to ensure seamless cooperation across defense components, other government departments, and allies.
- Views MDI as a mindset requiring substantial changes in defense and government.
- Defines several domains for MDI: Air, Cyber, Electromagnetic, Maritime, Land, and Space.

USA

- Views MDO as a way to integrate joint and Army capabilities across all domains to defeat advanced enemy defenses.
- Sees MDO as a tool to create relative advantages, achieve objectives, and consolidate gains.
- Stresses disciplined initiative, mission command culture, and rapid adaptability in uncertain situations.

GERMANY

- Envisions a future battlefield that is hyper, hybrid, and total, necessitating multidimensional cooperation.
- Believes that while technology is essential for MDO, non-technical aspects like leadership philosophy, training, and mindset are equally crucial.

FRANCE

- Regards MDO as a response to new international challenges, aiming to preserve military advantage and initiative for the Allies.
- Acknowledges potential opportunities with MDO but also recognizes unaddressed strategic questions and challenges.
- Warns against focusing solely on tactical successes at the expense of broader strategic vision.

UKRAINE

- Acknowledge and respond to extensive multi-domain battles across the nation involving conventional weapons.
- Recognize the high lethality posed by conventional weapon systems deployed by adversary forces.
- Given the increased morbidity and mortality, emphasize prehospital care and global health engagement strategies to mitigate battlefield casualties.
- POI Care and Immediate Response: Implement point of injury care guidelines and damage control measures to reduce battlefield casualties.

POLAND

- Prioritize the strengthening of the Armed Forces through increased personnel, equipment, and adapted training.
- Emphasize capabilities for unique and non-traditional warfare methods.
- Work on creating systems for battlefield isolation and hindering adversarial movements.
- Enhance the forces' ability to move swiftly and efficiently in the battlefield.
- Focus on the ability to sustain operations away from permanent locations for longer durations.

RoE in Peacetime

Dealing with the limitations and rules of engagement that apply during peacetime scenarios.

Adversary and Ally Understanding of MDO and Other Concepts

Ensuring that the game accurately models how both adversaries and allies perceive and respond to MDO, including strategies, doctrines, and objectives.

Interoperability

Different military domains (land, sea, air, space, cyber) often use distinct equipment, tactics, and communication systems.

Information Domain

Managing the flow of information and disinformation across various domains, ensuring players can leverage information effectively for strategic advantage.

Time

Dimension of time in military operations. i(speed of decision-making, synchronization of actions, the impact of delays)

MULTI-DOMAIN WARGAMING CHALLENGES

Rate of Attrition

Accounting for the rate at which military forces and capabilities are depleted or lost in combat, which can significantly affect the game's dynamics and outcome.

Command and Control (C2)

Representing command and control structures for each domain and their interaction.

Level of Warfare

Incorporating various levels of warfare (tactical, operational, and strategic) into the game scales and complexities of military operations.

Cyber Operations

Incorporating cyber warfare as a distinct domain and addressing the complexities of cyber operations.

Reserve

Balancing the use of reserve forces (incl. deployment, readiness, and strategic employment)

Logistics

Managing the supply chain, transportation, and support structures required to sustain military operations (incl. procurement, distribution, and maintenance of resources)

WOMEN IN COMMAND: HYBRID THREAT RISING

WE NEED YOU

SAS-172 MULTI-DOMAIN WARGAME RESEARCH TASK GROUP

WHY SHOULD YOU JOIN?

DO YOU WANT TO EMAIL THIS LEAFLET?

THE SAS-172 MULTI-DOMAIN RESEARCH TASK GROUP

The main objective is to produce working wargame and development toolkit for Multi-Domain Operations.

The wargame helps determine the capabilities needed to achieve the goals of three likely missions in 2035: response to

- mass migration,
- natural disaster,
- and inner-city turmoil.

A wargame to address the military impacts (in areas such as operations, training, personnel, supply chain and readiness) of Multi-Domain operational environment.

The team will conduct several workshops to train wargamers, concept developers and planners from NATO and National organizations on the MDO wargame, providing a necessary capability to train and learn about MDO.

THE HYBRID THREAT RISING GAME

The Hybrid Threat Rising game will provide the knowledge base for the SAS-172 Research Task Group's effort.

The Hybrid Threat Rising was developed using the outputs of the SAS-129 Task Group's game development method.

Following the publish of SAS-129 Final Report, the development of the Alpha Release took a total of 3 months with daily playtests. The game is currently being ameliorated using the outputs of a playtest team.

The game currently creates an armed conflict scenario in a realistic way with accurate/close to real-life events and consequences to be played through a 2h period. In order to achieve the most realistic outcomes, the project team has used various documents and reports written by NATO, DSTL, Institute for the Study of War etc.

The game demonstrates different aspects of hybrid war such as ISR, multi-domain operations, cyber-attacks, media influence, international organizations' effect, and kinetic war itself.

CONTACT

To join the SAS-172 Research Task Group, please reach out to your National Representative or Contact NATO STO Office.

To play the Hybrid Threat Rising game with us, contact etcbv66.seyin@k2bois.com.

TUTORIAL

SAS-172 MDO WARGAME

THE SCENARIO

THE SCENARIO

The game is structured into 12 operational months, each reflecting the dynamics of a hybrid conflict scenario.

PHASE 1

RED forces employ psychological operations and special forces to infiltrate the GREEN territory, while the GREEN faction, reinforced by BLUE, responds with ambushes, cyber attacks, and plans joint exercises. Personnel losses remain minimal.

PHASE 2

The conflict escalates as all factions ramp up efforts in all domains, particularly on Sea, Air, and Land. Propaganda campaigns, cyber attacks, and space reconnaissance are used to support operations. As RED loses internal control, an uprising begins.

PHASE 3

Tensions intensify as the RED population within GREEN join the fight as non-state actors. The uprising in RED borders leads to the capture of nuclear facilities by rebels. As RED tries to manage division among citizens as a failed state, GREEN has to defend its territory from RED citizens within.

PHASE 4

With complete breakdown of the RED country, warlords with access to nuclear and military resources take control. The conflict reaches its peak and all domains become fully engaged with BLUE involvement. Logistics capabilities become critical targets as the factions seek to undermine each other. Reconnaissance and EW operations are utilised to maximise the impact of all actions.
